Conference on

**Cultural Heritage and
New Technologies**

November 8–10, 2017

City Hall, Vienna, Austria

Urban Archaeology and Data

Combining archaeology, history, and new technologies

The aim of this conference is to enhance the collaboration between historians and archaeologists and related disciplines using new technologies.

- Application of effective 3D-methods for the reconstruction of buildings
- Additional digital methods for the combined visualisation of archaeological and historical data.
- Application of new technologies to assess the archaeological record based on historical data and/or combining historical sources and archaeological data in a GIS.
- Games, apps, and teaching software integrating archaeological and historical knowledge.
- Historical data as a basis for checking or validating digital tools applied in archaeology.
- Dealing with inscriptions: digital methods for enhancing readability, pattern recognition of letters or pictograms, comparison of hand writing.
- Statistical analysis investigating the correlation between historical place names and archaeological evidence.
